FOREWORD

This number covers books and periodical articles on Cryptography with a concentration on WWI and WWII developments. Cryptography is the science of enciphering and deciphering for a communications purpose. The subject has application in both the civilian and military areas.

Arrangement of this list is in parts. Part One presents books which provide a general understanding of the field. Part Two is on periodical articles. These are indicated by an arbitrarily derived acronyms list. International Standard Stock Numbers (ISSN) are shown for procurement and verification purposes. Inclusion of an item, or omission, neither implies USAFAS indorsement or sanction of the compiler's point-of-view nor does it guarantee accuracy of content. Comment and criticism concerning this list is solicited.

LESTER L. MILLER, JR.
Supervisory Librarian
